

Fly Spray Internal Treatment

PLEASE BE READY FOR THE TECHNICIAN TO START THE TREATMENT AS SOON AS THEY ARRIVE.

Any delays in your preparation may mean the technician may not be able to complete the treatment in the allocated time and will have to re-book the remainder for another day.

Good preparation also means the technician can do a better, more thorough treatment.

PREPERATION:

- *Put all food & cooking utensils away.
- *Put towels, toothbrushes & toilet paper away.
- *Please have no laundry hanging out.
- *Cover pillows, baby beds and other precious items.
- *Cover or remove and fish or reptile tanks & turn the air supply off.
- *Cover kitchen benches, tables, wax/oil furnished furniture, TV's, computers & electrical equipment & other wooden furniture with newspaper or a sheet.
- *Move any precious items so operators cannot knock them over.
- *Put away pet food & water bowls.
- *Cover or remove oil paintings.

[ALL OCCUPANT'S AND PETS NEED TO VACATE DWELLING FOR A PERIOD OF 3 TO 4 HOURS]

AFTER TREATMENT:

- *After each treatment, it is important that you stay out of the house until the treatment is completely dry.
- *When you re-enter the property, please open doors and windows to flush dampness out & ventilate rooms.

WINDOW CLEANING

- *This is best done AFTER treatment as we cannot guarantee there will be no overspray on windows.
- *Window & door frames are important fly and spider resting areas & therefore need to be treated, which may produce a light mist on window edge. This can be removed by wiping with a dry cloth. Stubborn areas can be cleaned with a small quantity of window cleaner & wiped down.
